Winning Strategies from the 3rd Annual
Districts of the Year ..... 38
APPENDIX ..... 40

From the moment students step into an AP classroom, they notice the difference - in the teacher's approach to the subject, in the attitude of their classmates, in the new way of thinking the curriculum requires. That's because AP is more than just a class, it's a community of students and educators who are passionate, curious, and committed to academic excellence. In AP classrooms, students examine texts, data, and evidence with great care, learning to analyze source material, develop and test hypotheses, and craft effective arguments. They engage in intense discussions, solve problems collaboratively, and learn to write and speak clearly and persuasively.

The Advanced Placement Program - the collaborative community of AP teachers and students, states, districts, schools, colleges, and universities committed to the daily work of developing college-level knowledge and skills - has grown significantly in the past 10 years. This expansion is built on the deep conviction that all students who are academically preparedno matter their location, background, or socioeconomic status - deserve the opportunity to access the rigor and benefits of AP.

When compared to their matched peers, research consistently shows that students who score a 3 or higher on an AP Exam typically:

- Earn higher GPAs in college.

Perform as well or better in subsequent college courses in the discipline than non-AP students who took the introductory class in college

- Take more - not less - college course work in the discipline.
- Are more likely to graduate college within five years
. Have higher graduation rates. ${ }^{1}$

When students succeed on AP Exams, it means that their mastery of college-level content and skills has been externally validated by experts in the field. This validation is honored by thousands of colleges and universities around the world, who award credit, placement, or both for the demonstrated accomplishments of these motivated students.

## A LOOK AT THE PAST 10 YEARS OF AP

|  | $\begin{gathered} \text { CLASs OF } \\ 2003 \end{gathered}$ | $\begin{gathered} \text { CLASs OF } \\ 2013 \end{gathered}$ | Increase |
| :---: | :---: | :---: | :---: |
| Total AP Examinees | 514,163 | 1,003,430 | 489,267 |
| Total AP Low-Income Examinees | 58,489 | 275,864 | 217,375 |
| Total AP Examinees with Only Scores of <3 | 182,429 | 395,925 | 213,496 |
| Total AP Examinees with at Least One Score of $3+$ | 331,734 | 607,505 | 275,771 |

|  | $\begin{gathered} \text { CLASS OF } \\ 2003 \end{gathered}$ | $\begin{gathered} \text { CLASS OF } \\ 2013 \end{gathered}$ | Increase |
| :---: | :---: | :---: | :---: |
| Total AP Exams | 1,328,511 | 3,153,014 | 1,824,503 |
| Total AP Exam <br> Scores < 3 | 521,620 | 1,345,988 | 824,368 |
| Total AP Exam Scores of 3+ | 806,891 | 1,807,026 | 1,000,135 |

However, there are more academically ready students out there who are not participating. Nearly $\mathbf{3 0 0 , 0 0 0}$ students in the class of 2013 with potential to succeed in AP graduated having never participated in a matched AP course.
The next step toward equitable access and responsible expansion is to identify those students with potential, using validated tools, and ensure they have the AP opportunities they have earned.

We hope to accomplish two things with this 10th Annual AP Report to the Nation: to celebrate the AP community's hard work and incredible achievement and to highlight areas for continuous improvement.

## CURRENT PICTURE

The AP Exam results for the class of 2013, highlighted on the following pages, show that students continue to demonstrate college-level skills and knowledge in increasing numbers. Even as AP teachers deliver rigor to an ever-diversifying population of students, participation and performance continue to improve. Behind and within these data are the daily sacrifices of AP students and teachers, including the late nights that students put in diligently studying and the Saturdays that teachers give up to help their students succeed. Their hard work and effort are worth celebrating.

## In 2013:

1 in 5
U.S. public high school
graduates scored a 3
or higher on an AP Exam during high school

607,505
U.S. public high school graduates scored a 3 or higher on an AP Exam during high school

17 states had a larger change over the last 10 years, in graduates scoring a 3 o higher on an AP Exam, than the national average

## PARTICIPATION <br> AND PERFORMANCE

In the last decade, more students than ever before have experienced college-level rigor while still in high school by taking AP courses and exams. As you will see on the next few pages, many states have seen a comparable increase in graduates scoring 3 or higher on AP Exams. Other states are working hard to close the gap between participation and success.

Figure 1

Number of Graduates Taking and Scoring a 3 or Highe on an AP Exam

Number of graduates leaving high school having taken an AP Exam
Number of graduates scoring $3+$ on an AP Exam during high schoo

What do the data show?
More graduates
are succeeding on AP Exams today than
took AP Exams in 2003

1,003,430
U.S. public high school
graduates took at least one AP Exam

132,555
U.S. high school teachers taught an AP course last year

## 23,034

AP Coordinators, counselors and principals used AP data to shape their schools' programs

Percentage of the Class of 2013 Scoring a 3 or Higher on an AP Exam During High School

Raw numbers for this figure are available in the Appendix. Ties are alphabetized by state name.

Percentage of the Classes of 2003 and 2013
Scoring a 3 or Higher on an AP Exam During High School, Ranked by Percentage Point Change

## AUTHENTIC COLLABORATION

## How does AP happen?

The collaboration between college faculty and $A P$ teachers lies at the core of AP, ensuring rigor, relevance, and fairness. These groups work together to develop, deliver, and evaluate AP.

They collaborate to develop and validate each teacher's individual syllabus - ensuring teachers fully understand the elements required for an AP course to be considered college level.Through high-quality professional development and active teacher participation in the online AP teacher community, successful strategies are shared beyond individual classrooms. Finally, these groups come together to evaluate actual student work allowing themselves to be invested in this process from the beginning to the end.

## What is the AP Reading?

## AFTER STUDENTS TOOK THEIR

 AP EXAMS IN MAY 2013,

## 11,497

AP teachers and college professors spent

3 weeks.

ON THE SURFACE, THIS IS SIMPLY AN OPERATIONAL AND LOGISTICAL FEAT. AT ITS HEART, IT IS THE STRENGTH OF tHE AP PROGRAM.

"Every year I find one small thing that I know that if I went back and changed that, it would have an impact on what my students were able to do. Isn't that worth it? That's the thing that is going to make a huge impact on student lives.'

## Bill Zeigler

AP World History Teacher
San Marcos High School, CA

It's great the degree that college and high school teachers interact here. I think the college professors get a very worthwhile perspective on what's going on in the students' educational lives prior to coming to us in college. These high school teachers are extremely knowledgeable and extremely competent and care very much about student learning."

## Allan Rossman

Professor of Statistics,
Cal Poly - San Luis Obispo
Chief Reader, AP Statistics

## Why is the Reading important?

The Reading ensures that a consistent, fair standard is applied to students' work. No matter what a student's background is or who he or she is, each student's exam is scored by a single set of standards developed by college faculty and AP teachers from around the country. This gives students confidence that their work is evaluated fairly, and it gives colleges confidence that an AP score represents an objective, national standard.

"AP in the high school classroom helps students develop discipline and the ability to follow directions and deadlines. ... It's great when they get a good score on the exam, but we try to stress ... curiosity, the ability to experiment and critically think. We use that in the art world: to go out on a limb and try this and try that and AP sets the stage ... for students to have the opportunity, and yet the structure, to succeed.

## Herb Weaver

Professor of Art, Georgia Gwinnett College Chief Reader, AP Studio Art
"The great thing about $A P$ and why it helos people like me with teaching is that you have very well-defined curricular goals. The goals and objectives in all the AP courses are spelled out in great detail and there are great examples of assessment. We Ihigh school teachers and college professorsl have a lot to learn from each other. ... We all learn together about new assessment strategies by working on the [Readingl, and then we share pedagogical strategies with each other."

Rich Lambert
Professor, Department of Educational Leadership and Director, Center for Educational Measurement and Evaluation University of North Carolina at Charlotte Reader, AP Statistics

The involvement of college faculty in the AP Reading helps to ensure that rigorous college-level standards for achievement are maintained in the scoring.

The AP Reading offers a unique opportunity for collaboration and professional development among high school and higher education faculty that ultimately benefits students. It is an example of a truly meaningful $\mathrm{P}-16^{3}$ initiative - secondary and postsecondary educators work side by side toward the common goal of scoring exams fairly. In doing so, they achieve several goals of P-16 initiatives raising academic standards, conducting appropriat assessments, improving teacher quality, and generally smoothing student transitions from one level of learning to the next

"When you first go to the Reading and you see what's possible for students to do in this course, it really elevates your thinking ... every student gets a hance. Their work is graded without prejudice or bias. Since so many people ee their portfolio, I think it's a really
legitimate score."
Colleen Harrigan
AP Studio Art Teacher
Clarkstown South High School, NY
"I like the fairness of it. As a teache
I can go back to my students and constantly reassure them that there's a process that's very interested in what's best for you. There's no gotcha at all. So, that fairness in giving each child the est opportunity really is here. I always say "Each [exam] is a child. Each [exam] is a child."

## Deborah Hill

AP Biology Teacher
Norman High School, OK

## 4TH ANNUAL <br> DISTRICTS OF THE YEAR

Promoting equity and excellence in education is the cornerstone of the College Board's mission. It is also an objective of all members of the AP community, from AP teachers to district and school administrators to college professors. When a school district is able to increase access to AP course work for more students while simultaneously increasing the percentage of students earning scores of 3 or higher on AP Exams, this achievement is worthy of recognition.

The achievement of both of these goals is a true hallmark of excellence for a district's AP program because it indicates that the district is successfully identifying motivated, academically prepared students who are likely to benefit most from rigorous AP course work. Many districts are experimenting with a variety of initiatives and strategies aimed at expanding access and improving student performance simultaneously. When strategies are successful, like those demonstrated by District of the Year award winners, we hope they can serve as a model to others around the nation.

Read more winning strategies from last year's Districts of theYear on pages 38-39.

Leyden High School District 212, Illinois
"This award is a tremendous honor for Leyden students, families, and staff. It represents a validation of the countless hours of preparation students and teachers pour into Advanced Placement classes. We attribute the success Leyden students have demonstrated to fairly simple principles

1. We are relentless in hiring, supporting, and retaining great teachers at all levels. 2. We provide students with the resources and supports they need to succeed. For example, by providing a networked laptop to every student, students and teachers have unprecedented opportunities to research connect, create, communicate, and collaborate 3. We do not restrict students' access to AP curriculum. Although AP classes have defined prerequisite courses, we do not "handpick" students who are allowed to take these courses. We are committed to encouraging all students to consider Advanced Placement courses whenever possible, and teachers and counselors strive to give students an accurate depiction of what each AP class requires.

## Dr. Nick Polyak

Superintendent
Leyden High School District 212

## OPPORTUNITY

There is one clear, undeniable benefit awarded to every single student who enrolls in AP: opportunity. When coupled with a student's hard work, that opportunity can have myriad outcomes whether it is learning to craft effective arguments, discovering a lifelong passion, building confidence, earning credit for college, or persisting to graduate from college on time.

As seen in the Current Picture section, the expansion of AP over the past 10 years has resulted in the growth of student opportunity.

However, there is more work to be done. The most immediate, pressing issue that policymakers, educators, and the College Board need to work together to address: Hundreds of thousands of students have earned, through their hard work and natural ability, the opportunity to take AP, but they aren't taking the courses.

The data outlined on the following pages are thought-provoking and show the complexity of the issue. We hope the numbers inspire a collective response to figure out the why and to tackle the how.

## 286,403 <br> students are not taking the matched AP course for which

 they show potential ${ }^{4}$Only 1
state has closed the performance equity gap for black/African American students
48.1 \% ${ }^{5}$
of K-12 U.S. public school students qualify for the fre or reduced-price lunch program, compared to 27.5\% of AP Exam takers in the graduating class

## RIGHT TO RIGOR

All students who are academically ready for the rigor of AP - no matter their location, background, or socioeconomic status - have the right to fulfill that potential. Last year, however, hundreds of thousands of prepared students in this country either did not take a course in an available AP subject for which they had the potential to succeed or attended a school that did not offer a course in the subject

The graphic on the following page examines this phenomenon for the sciences, and it illustrates that black/African American, Hispanic/Latino, and American Indian/Alaska Native students who have the same AP readiness as their Asian/Asian American/Pacific Islander peers are significantly less likely to experience AP-level course work.

How can educators determine readiness for AP? Many schools use a student's previous GPA or letter grade in a prerequisite course to determine admission to an AP course. Currently, the strongest predictor of success in many AP courses is a student's performance on particular Preliminary SAT/National Merit Scholarship QualifyingTest (PSAT/NMSQT ${ }^{*}$ ) sections that are highly correlated to success in AP. ${ }^{6}$ From these PSAT/NMSOT results, the AP Potential ${ }^{\text {TM }}$ tool can identify students with a 60 percent or higher likelihood of succeeding in particular AP subjects

So what can schools and teachers do? Use AP Potential or other data to identify students who are prepared for college-level courses and exams at your schools. If you have a critical mass of students with high potential for success on an AP Exam, consider adding a new AP course or a new section for an existing course. Providing an AP course for these students can help your school or district increase access to AP while maintaining or improving performance on AP Exams. Hosting recruiting events for potential students and their parents can also provide the encouragement needed to convince students to enroll.
n each graduating class,
hundreds of thousands demonstrate high potential for success in AP science course work.

is the greatest potential lost?
Among students with high potential for success in AP science course work:

6 out of 10
Asian/Asian American/
Pacific Islander students

4 out of 10
white students

4 out of 10
Hispanic/Latino students

3 out of 10
black/African American
students

3 out of 10
American Indian/ Alaska Native students

... took any such AP science course.

## PROMOTING EQUITY

Since its inception, AP Report to the Nation has highlighted the equity gap in AP participation and performance for traditionally underserved minority students. These students remain underrepresented not only in the AP classroom and in the population of successful AP students but also among Americans with a college degree.

Figure 8
Demographics of the Graduating Class and AP Exam Takers ${ }^{7}$ in 2013

What do the data show?
Black/African American
students in the graduating class of 2013 were
the most underrepresented group in AP
classrooms and in the population of successful
AP Exam takers

Understanding Figures 9a, 9b, 9c
The charts found in Figures 9a, 9b, and 9c show the progress made by states in 2013 on closing these participation and success gaps for black/African American, Hispanic/Latino, and American Indian/Alaska Native students.

In the Equity Gap Eliminated columns in Figures 9a, 9b, and 9c, a • indicates that the percentage of either AP Exam takers or successful AP Exam takers in the class of 2013 of a particular race/ethnicity is greater than or equal to the percentage of the overall graduating class who are of that race/ethnicity.

The Progress Since Last Year columns compare the size of the equity gaps in the classes of 2012 and 2013 and are computed using unrounded calculations. States making progress in decreasing these gaps are displayed as $\Delta$, while states in which the gap increased in size are displayed as $\boldsymbol{\nabla}$ States with no change are indicated with a dash.

You can find the data used in these calculations in Appendix D, available at apreport.collegeboard.org.

## LOW INCOME

In light of recent studies showing that parental income and educational level are the best predictors of high school success, ${ }^{8}$ we felt it imperative to also begin a conversation that will examine the equity gap in AP participation and success for low-income students.

Figure 9d on page 37 shows these data. As there is no national data source on high school graduates ow-income status, we used that of the National Center for Education Statistics (NCES), based upon free or reduced-price lunch eligibility. AP fee reductions are based on this eligibility as well.

## We acknowledge that NCES estimates reflect al

 K-12 public school students from the 2010-11 school year. Therefore, a degree of caution is warranted as they may not accurately reflect the graduating class. However, we felt this story was too important to tell to wait for a perfect data source. The gaps and opportunities shown in Figure 9d require our immediate attention.
## 275,864

ow-income public school graduates took at least one AP Exam

## 131,911

ow-income public school graduates scored 3 or higher on an AP Exam during high school

Equity Gaps Among Traditionally Underserved Students in the Class of 2013: Low Income ${ }^{9}$

## WINNING STRATEGIES <br> FROM THE 3RD ANNUAL DISTRICTS OF THE YEAR

The achievement of simultaneously increasing access to AP course work for more students while supporting student success is a true hallmark of excellence for a district's AP program because it indicates that the district is successfully identifying motivated, academically prepared students who are likely to benefit most from rigorous AP course work.

Many districts are experimenting with a variety of initiatives and strategies aimed at expanding access and improving student performance simultaneously. When strategies are successful, like those demonstrated by District of the Year award winners, we hope they can serve as a mode to others around the nation

Align Curriculum and Instruction

We've done some work with the middle school teachers so that we're vertically aligned. So, when the kids get to a place where they could take an AP course, they're prepared to do that. The program that we work with starts in sixth grade. I think that the earlier you start with the kids the more success you'll have with them later on. That way, you know that when they get o AP, they have the fundamentals that we can build on."

Rachel Barlage
12th Grade AP English Teacher
and Lead Teacher for ELA Department
Small District Winner: Chelsea Public Schools, MA

Remove Financial Barriers
"One of the things that our district does that I think is unique [is] ... for every student that signs up for and completes the AP course, our district pays for the exam. ... Our district has identified obstacles and tries to remove those obstacles so that students can access what they though might have been inaccessible. So, the financial component, we tried to remove. And I don' hink that's inconsequential. It sends an implicit message to students that this is something for them and we believe in you so much that we're willing to pay the entrance fee. I think it's cornerstone of our culture.

## Jonathan Parker

AP U.S. History Teacher
Medium District Winner: Glendale Union High School District, AZ

## Identify and Recruit

 Students with PotentialNorth East works really hard at finding students who might be successful in AP. We disaggregate state testing data. We use AP otential. In addition, our counselors meet regularly with students, and just talk one on one and look at their testing data and find out what are their goals and aspirations. ... At all of the schools [in our districtl one of our goals is to find students who might not otherwise participate in the program and to bring them in and assure them that we, the adults, are there to help them. We're the support system and we're going to use all the tools in the toolbox to make sure that they find success; Iwe tell the studentsl yes, it's difficult and, yes, you'll be challenged, but we're going to be there.

Sheila Richards
AP English IV Teacher
Large District Winner: North East Independent School District, TX

## About the Data

Because a central source of demographic data for nonpublic schools is not available for all states, this report represents public school students only. References to the total number of high school graduates represent projections supplied in Knocking at the College Door (Western Interstate Commission for Higher Education, 2012). Additionally, this report looks at students' entire experience with AP - tracking exams taken by graduates throughout their high school careers - as opposed to just reporting exam results from a particular calendar year. Additional data are available exclusively online at apreport.collegeboard.org.

## Notes

1. For more information on the research supporting these Ulims, see hitp://bit.ly/Wnoobn and hitp://bit.ly/YWbtTe and htpp://bit.1/y/3/3MGK11 and htpp://bit.1/yvRyzFK.
2. The redesigned courses, Biology, Latin, and Spanish Literature and Culture, began in fall 2012 , and the first AP Exams based on those reedesigned courses was administed blend of the old and redesigned exam results.

#### Abstract

About the College Board The College Board is a mission-driven not-for-profit organization that connects students to college success and opportunity. Founded in 1900, the College Board was created to expand access to higher education. Today, the membership association is made up of over 6,000 of the world's leading educational institutions and is dedicated to promoting excellence and equity in education. Each year, the College Board helps more than seven million students prepare for a successful transition to college through programs and services in college readiness and college success - including the SAT ${ }^{\oplus}$ and the Advanced Placement Program ${ }^{\ominus}$. The organization also serves the education community through research and advocacy on behalf of students, educators, and schools.
